خلاصه مقاله:

Kashan as one of the oldest human's habitation has been face with several challenges. This city has kept its structure and dignity with peace and sometimes with conflict. These stories have resulted in interaction with environment based on cultural perspective. This has made Kashan to become a city with accord of environment and human, a community that not only copes with each other but sublimation in various aspects. In addition, Kashan is part of a bigger social system, Iran, which has interact with its environmental area in order to sustain its existence. What have made Kashan sustainable are its affect of climate system, applying in its life and accurate effect on it to human sublimation. In this paper we have examined dynamic and persistent characteristics and attributes in Kashan using descriptive historical method. We have examined the effect of these periods on social, cultural and environmental aspects in the city. Our purpose is to identify the historical elements that have resulted in climatic, cultural and social sustainability of Kashan.
