Reviews on principles and system of rural development in Iran

Naser Shafiei Sabet - Assistant Professor of Human Geography Group, Shahid Beheshti University
Negin Sadat Mirvahedi - MA Student of Geography and Rural Planning Course, Shahid Beheshti University

Rural development is an important part of the process of national development, especially in developing countries. In today's low-income countries, rural development as a dominant approach in the process of national development, accepted, especially since in most of these countries, the dominant population, still live in rural areas and improve the living conditions of this group accepted such countries. They've been on the principles of governance and rural development over the years to think in Iran. The research method is descriptive - analytic. The findings suggest that the proportion of rural population growth rate, its share of the total population of the country is decreasing. The literacy rate in the rural community is growing, so that the ratio of 1/01 percent in 1350 to 75 percent in 1380 reached. During different periods, most health variables has been growing. The proportion of the population 10 years and older declined from 0/28 to 5/37 percent percent in 1350 and dropped in 1360, but with an increasing trend to 8/38 percent reached in 1390. Villages benefit from the services infrastructure and superstructure has been a significant growth in the years 1350 to 1370. The ratio of working population to the total rural population from 1345 to 1365 also declining, but in the next round with an increasing trend from 23% in 1360 to 35% per cent reached in 1390. Despite the recent emphasis on developing programs orchestrate, physical approach to rural development has been overcome. Providing infrastructure services in rural areas compared with other targets in the field of rural development has been more successful.

Keywords: Development, rural development, rural development in Iran.
