FINITE DIFFERENCE METHOD FOR DYNAMIC ANALYSIS OF VERTICAL RISERS UNDER DIFFERENT SHEAR CURRENTS

Madjid Ghodsi Hasanabad - Research manager/ Assistant professor - Islamic azad university - Science and research branch of tehran-Department of marine science and technology
Pourya Fallah Lichaee - Master of science - Islamic azad university - Science and research branch of tehran- Department of marine scienceand technology

Long slender marine structures such as long flexible risers and mooring lines have complex behavior due to VIV (Vortex induced vibration) that the prediction of them are so important for safe and economic design.

Finite difference method, riser, dynamic analysis, VIV.
