The aim of this study is to determine the relation dimension temperament/character with social and domestic about patients' general anxiety disorder. In this research, correlation method is used. The study population included all patients with general anxiety disorder referred to health centers in Ardabil in 2014. The sample consisted of 37 patients who were identified and selected by convenience sampling method. To collect the data, anxious thoughts, general anxiety disorder questionnaire, temperament and character questionnaire, social compliance questionnaire were used. The present study data were analyzed with the Pearson correlation coefficient methods. The data analysis showed that there is a significant negative relationship between novelty seeking and harm avoidance of social and family functioning. There is a significant positive relationship between reward dependence, cooperation, confronted with social and family functioning. These results have important applications in the pathology and treatment of patients with general anxiety disorder.

Keywords: Temperament, character, social functions, familiar functions, general anxiety disorder
