خلاصه مقاله:

Nowadays, the social network has significant effects on all aspects of our life and as a strong medium helps tremendously in the field of education. As a complementary space for stimulating, social networking sites (SNSs) become an important part of a 21st-century. Social networks have many advantages for educational purpose and they are basically used to stay connected with prospective educators and also to receive educational content. However, one of the main social networking sites which are designed for the classroom is Edmodo, It is claimed that Edmodo creates a safe environment space for both educators and learners. Although Edmodo is a tool similar to Facebook, this article will investigate the review of pervious literatures about the use of Edmodo platform as an educational space, the result showed that Edmodo is a powerful and safe educational environment for class because students can improve their knowledge and engagement via participation in tasks and discussions

کلمات کلیدی:

Social Networking; Edmodo; Student Performance
