خلاصه مقاله:

From the perspective of geological and geomorphic Kouhsaran are one of the important units ground, that many of them have are tectonic origin, and the collision of the Earth's surface crust (continents) have been created. Foothills natural land use change and meadows and forests Kouhsaran to residential structures, industrial and agricultural, and especially road building in Kouhsaran areas with high volume excavation and embankment in addition to the indiscriminate use of tourists from, which is often accompanied by the creation of installations and buildings and the cause instead of putting the waste and is an integral tourists waste, adverse effects on biodiversity, beauty and stability nature mountain leaves. The aim of this study provide sustainable design solutions Kouhsaran landscape and the possibility development is in format of physical performance. Preserving natural heritage, tourism development with emphasis on maintaining and improving environmental quality and creating a favorable environment for research and recreation among design goals these environments can be. Predictable results, reducing conflict in pristine areas using zoning by using zoning method and with an emphasis on preserving and developing the natural state and maintaining habitats and reducing negative human conflicts at the regional level is. Achieving conservation goals and ultimately achieve the principles for sustainable tourism and provide a model for designing with minimal damage to nature as a result, achieve sustainable design with considering regional environmental considerations, is concerned

کلمات کلیدی:

Kouhsaran, sustainable design, development, protection, tourism
